

# BabyMisc

**Description :** See the file structure.

**Author :** 0xRakesh Kumar.

## Given:

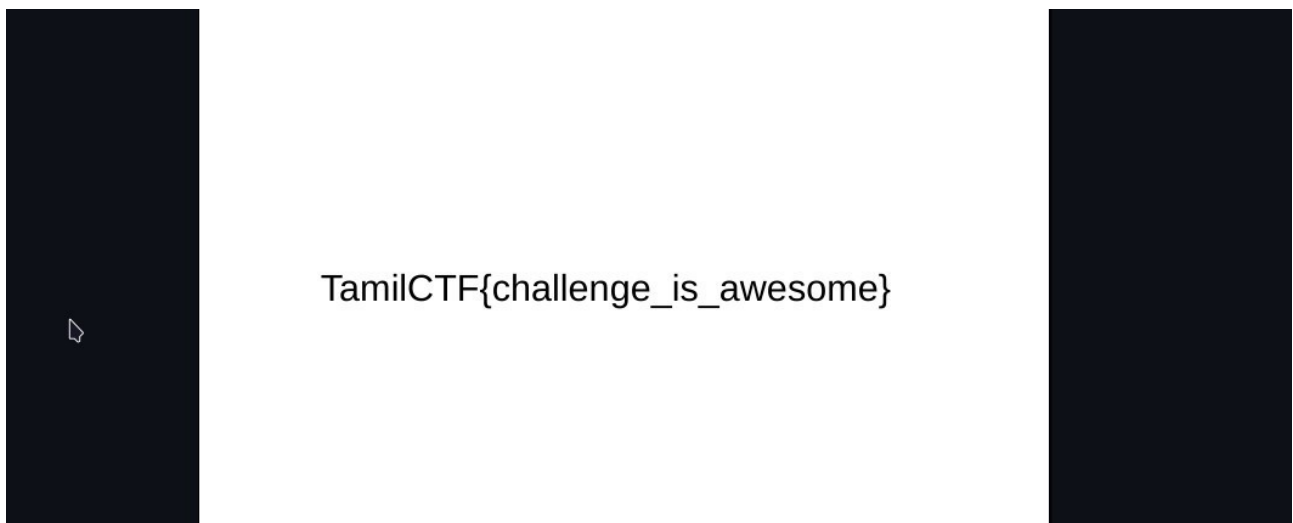

There are only one file . **BabyMisc** . It has no extension, so find the file type with file command .

```
00:00:22 ...ctf/tamilctf_2.0/Babymisc ? master 
file output
output: PDF document, version 1.6

00:00:24 ...ctf/tamilctf_2.0/Babymisc ? master 

```

It is **PDF** document file, open in any document viewer.

It has the flag. First time, I think was the flag. But it was the ***fake flag***. :( Lets investigate the file.

## Open in HexViewer:

I am using **GHEX** . Open the file in GHEX Editor.

```

```

Did you notice that , the file has a two extension **PDF ( PDF )** and **ZIP ( .PK )**  
It is polyglots file. Lets unzip the file and look up the unzipped files.

```

00:05:08 > ...ctf/tamilctf_2.0/Babymisc > master
unzip something.zip -d something
Archive:  something.zip
  extracting: something/10.pdf.txt
  extracting: something/11.pdf.txt
  extracting: something/12.pdf.txt
  extracting: something/13.pdf.txt
  extracting: something/1.pdf.txt
  extracting: something/2.pdf.txt
  extracting: something/3.pdf.txt

  extracting: something/9.pdf.txt

00:05:11 > ...ctf/tamilctf_2.0/Babymisc > master

```

It has **many text files** . Cat all the files.

```

00:05:52 > ...ctf/tamilctf_2.0/Babymisc/something > master
cat *

00:05:53 > ...ctf/tamilctf_2.0/Babymisc/something > master

```

It has some human readable strings and encoded strings. Quickly I find that some strings are encoded in **Base64**. Decode it .

```
